1. How has the client’s communication or swallowing disorder affected his/her functional abilities?

2. Describe the short-term objectives that you think were being addressed during the session.

3. Do you think the stimulus materials were appropriate for the client and the objectives of the session? Give examples to support your answer.

4. Describe the type and method of data collected during the session.

5. What examples of behavior did you see in the clinician indicating that he/she responded to the changing needs of the client (reducing difficulty level, control of behavior, etc)?

6. Describe any helpful information you gained from observing this session that you may use in the future (e.g., activities, techniques, reinforcement, interactions, etc.).
